

Clean Set of Claims

1. A voice messaging system, comprising:

a controller;

a voice message memory; and

a deleted voice message memory;

wherein a voice message is initially stored in said voice message memory, and upon deletion of said voice message from said voice message memory, said voice message is moved and restored in said deleted voice message memory.

12. A method for managing a deleted voice message from a voice messaging system, comprising:

removing said deleted voice message, upon deletion from a first memory area, and storing said deleted voice message memory in a second memory area.

22. Apparatus for retrieving a deleted voice message from a voice messaging system, comprising:

means for removing said deleted voice message, upon deletion, from a first memory area;

means for storing said deleted voice message in a deleted voice message memory; and

means for retrieving said deleted voice message from said deleted voice message memory for playback.

Version with Markings to Show Changes Made

1. (Amended) A voice messaging system, comprising:
a controller;
a voice message memory; and
a deleted voice message memory;

wherein a voice message is initially stored in said voice message memory, and upon deletion of said voice message from said voice message memory, said voice message is moved and restored in said deleted voice message memory.

12. (Amended) A method for managing a deleted voice message from a voice messaging system, comprising:

removing [storing] said deleted voice message, upon deletion from a first memory area, and storing said [in a] deleted voice message memory in a second memory area.

22. (Amended) Apparatus for retrieving a deleted voice message from a voice messaging system, comprising:

means for removing said deleted voice message, upon deletion, from a first memory area;

means for storing [a] said deleted voice message in a deleted voice message memory; and

means for retrieving said deleted voice message from said deleted voice message memory for playback.
